

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Thirteen years ago, the writer described an experiment in which the result was the direct opposite to that called for by reading on it one of the most prominent of the laws stated by Maxwell. The proposed paper describing it was rejected by one of our leading societies on the ground that if true (which was very easily demonstrated) it was such a serious matter to refute one of Maxwell's laws that it ought to be kept a secret! It is needless to say that the writer published it; broad-minded electro-physicists have accepted this correction of that law.

Let us hope that our younger physicists will be more progressive and will develop the true scientific spirit of desiring to be corrected when it can be shown that what they teach their students is wrong.

THE SCIENTIFIC BUREAUS OF THE GOVERNMENT

TO THE EDITOR OF SCIENCE: Since my return to Washington from my summer's field work my attention has been called several times to circulars which have been sent broadcast throughout the country by Mr. Arthur MacDonald, The Congressional, Washington, D.C., recommending the reorganization of all of the government scientific bureaus under the direction of the Smithsonian Institution. While the institution appreciates the confidence in it implied by his suggestion, I desire to point out that his scheme is entirely impracticable and was not suggested or authorized by the Smithsonian Institution, with which Mr. MacDonald is not connected in any way.

I shall be glad if you will have the goodness to publish the above in SCIENCE, in order that your readers may understand thoroughly that the institution is in no way responsible for this propaganda.

CHARLES D. WALCOTT,
Secretary

THE SMITHSONIAN INSTITUTION,

QUOTATIONS

MEETING OF THE AMERICAN ASSOCIATION IN CANADA

THE American Association for the Advancement of Science is to hold its annual meeting in Toronto this winter. The rules of the association, recently revised, give the term "American" a Continental instead of a national connotation, so that the visit to Canada will be regarded as a normal rather than as an extra-territorial event. There is thus a departure from the constitutional precedent of the British Association and of its French and German parallels. These bodies are national, although they welcome foreign guests, and have occasionally paid visits to foreign countries. Were the matter political, difficult questions might arise with regard to the proposed visit of the British Association to Toronto in 1924. The former visits of the British Association to Montreal and Toronto, and later to South Africa and Australia, were regarded as not different in kind from visits to Edinburgh or to Bournemouth. The formation since then of a South African Association for the Advancement of Science would certainly not place any obstacle in the way of another British visit to the Cape. The inclusion of Canada in the American sphere similarly should not affect the prospects of future visits of the British Association. It is all to the good that science should prefer geographical to political frontiers. We confess to a feeling of envy, however, when we read of the concessions made by American railways to science. The utmost efforts failed to extract from the British railways such reductions in fare to members of the British Association going to Edinburgh as they readily concede to pleasure parties and week-end excursions. The railroads of America are acting differently. Reduced rates for visitors to the Toronto meeting have been granted by all the railways of Canada and by those covering practically all the New England and Atlantic Coast States down to Virginia, and by those serving Ohio, Indiana, Michigan, and Illinois. Other concessions are expected, and so far as the railway journey
